

Advanced Features of Hotel Management Software Systems

● Hotel Central Reservation System

Central Reservation System solution is a central point for unlimited distribution of your hotel rooms and services to all desired channels.

● Hotel Data Administration Application

Content Management is a centrally hosted data administration application that allows hotels to upload, store, manage and distribute textual and multimedia content to both indirect and direct channels, simply and effectively.

● Multi-Channel Distribution Solution

Channel Hub is a multi-channel distribution solution built with a single interface to connect hotels to online travel agencies, travel websites, metasearch engines and GDSs - more efficiently and cost-effectively.

● Multi-Criteria Hotel Search Solutions

Channel Hub Plus is a multi-channel distribution solution which is built on a single interface and search engine technology that facilitates powerful, multi-criteria hotel search.

● Hotel Revenue Management

Revenue Management is a state-of-the-art solution that works to fill hotels' rooms at the most profitable price according to learned demand patterns, enabling hoteliers to transform their business performance by making informed inventory and rate management decisions based on concrete business intelligence.
